Technical Skills

ML & AI: LangChain, LlamaIndex, PyTorch, RAG, MCP, pgvector, Google ADK, Arize AI

Languages & Frameworks: Python (FastAPI), TypeScript (Next.js, React.js, Node.js), Go (net/http), SQL

Infrastructure & Ops: AWS, Azure, Kubernetes, Docker, GitHub Actions, PostgreSQL, Redis

Experience

Cofounder @ Echoes Events — Toronto, CA

December 2024 — Present

- Owned a wellness events platform end-to-end, using 100+ discovery interviews to frame problems and ship features.
- Built a Python batch pipeline ingesting 400+ event sources into a unified schema with tags and embeddings.
- Shipped a TanStack Start app on Azure covering host onboarding, event posting, and booking flows.
- Implemented embedding-based event recommendations and buddy matching to personalize discovery.

AI Engineer @ Freelancer — Toronto, CA

January 2023 — Present

- Built a RAG chatbot for an immigration consultancy ingesting voice notes and OCR'd multilingual documents (50-60 docs/client across 30 clients), cutting application prep from 2 hours to 20 minutes.
- Developed a logging app turning patient voice logs into structured clinical data (region, type, severity) for physiotherapist pre-session review, cutting session time from 45 to 30 minutes and enabling more daily appointments.
- Designed a multipersona chatbot using Google ADK and prompt engineering to ground responses in source texts, with logging/observability and guardrails to catch unsafe outputs.

Full Stack Software Engineer @ Scotiabank — Toronto, CA

Jun 2022 — Jan 2023

- Delivered e-transfer send and receive UI, Scotiabank's most-used digital banking feature, serving 10M+ users.
- Maintained 30+ BFF REST APIs in Next.js — trimming payloads, redacting PII, and decoupling frontend data needs.
- Created a 20+ component shared React UI library, eliminating 5% redundant code and 40% recurring bugs.

Full Stack ML Engineer @ Surgical Safety Technologies — Toronto, CA

Mar 2021 — Apr 2022

- Shipped an AWS video AI pipeline processing 200+ hrs/day for 5 hospitals, with real-time inference and transcoding.
- Built 3 React/D3 dashboards (admin, user, peer) using Kinesis streams and batch data, raising video uploads 400%.
- Rolled out feature-flagged canary deploys for UIs and AI models, cutting production incidents 40%.
- Provisioned a 6-node on-prem GPU cluster for HIPAA-compliant model training using Ansible to automate node configuration, data collection, and job scheduling.

Full Stack Software Engineer @ BlueFlower Media — Toronto, CA

Sep 2017 — Dec 2019

- Worked with 20+ small businesses to scope needs, prototype quickly, and ship production web products end-to-end.
- Built a containerized, load-balanced hosting platform (Docker, Kubernetes, Nginx), reducing hosting costs 70%.

Contract Machine Learning Engineer @ University of Toronto & LAMAS — Toronto, CA

May 2017 — Oct 2017

- Fine-tuned PyTorch KittiSeg for feature segmentation in architectural facade-to-3D pipeline, saving 12hrs/project.
- Built a Django web app for ML job submission and auto load-balanced GPU workloads across AWS EC2 instances.

Education

MS in Electrical and Computer Engineering @ University of Colorado Boulder

Expected 2027

Relevant Coursework: Linux System & Kernel Programming, Network Systems, Advanced Algorithms

HBS in Statistics @ University of Toronto

Class of 2021

Relevant Coursework: Systems Programming, Data Structures & Algorithms, Linear Algebra, Differential Equations
